1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
  - I. Claims 1, 2 and 9-12, classified in class 702, subclass 122, drawn to methods for sensor collaboration.
  - II. Claims 3-8, classified in class 702, subclass 188, drawn to process model generation.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of groups I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either:

  - (1) the process as claimed can be practiced by another materially different apparatus or by hand, or
  - (2) the apparatus as claimed can be used to practice another and materially different process.

(MPEP 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process, specifically one including model generation.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
5. A telephone call was made to Robert P. Tassinari, Jr. on 24 June 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.
